

- | REASONS  |
|--|
| 1. Subscriber -> customer_id. I want one customer_id for one subscriber, so I gave them a one to one relationship                        |
| 2. Inventory -> concessions_id. I wanted the inventory to be able to hold multiple concession_id's so it has a one to many relationship. |
| 3. Inventory -> ticket_id. " "   |
| 4. Movie_Faves -> subscriber_id. I wanted Movie_Faves to be able to hold multiple subscriber_ids's.                                      |
| 5. Movie_Faves -> movie_id. I also wanted it to hold multiple movie_id's so it has another one to many relationship.                     |
